SUMMARY

Diploma student in Computer Engineering at Government Polytechnic Pune, building full-stack web, mobile, and IoT projects with a focus on usability and performance. Passionate about creating scalable and user-friendly solutions, learning emerging technologies, and contributing to real-world projects that solve problems effectively.

SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript, Tailwind CSS, Framer Motion
- **IoT/Embedded:** ESP32, Arduino, Sensors Integration
- **Backend & Database:** Node.js, Flask, Firebase, REST APIs
- **Tools:** Git, GitHub, Vercel, EmailJS, PostgreSQL, MongoDB, AWS, Docker, Figma.
- **Other Skills:** HTML, CSS, C++, Data Structures, Python, Java, SQL, Power BI, Excel

EDUCATION

Diploma In Computer Engineering

Government Polytechnic Pune • Pune, India • 2026

- Completed multiple full-stack projects including Smart MedCare and Smart Xerox Centers
- Gained expertise in React, Next.js, Node.js, and IoT with ESP32
- Participated in workshops and practical labs for hardware and software integration

Higher Secondary Education (HSC)

Rajarshi Shahu Mahavidyalaya Latur (RSML) • Latur, India • 2022

- Gained strong foundation in core sciences: Physics, Chemistry, and Biology
- Participated in academic events and group study activities
- Built discipline and analytical problem-solving approach

PROJECT

Smart MedCare

GPP • July 2025 - Present

- IoT Health Monitoring system tracking vitals (BP, heart-rate, SpO₂) and hormones, with real-time alerts and rural-friendly design.
- Designed a real-time **IoT dashboard** for controlling devices remotely.
- Integrated multiple sensors with live data sync.

Privacy Over Media

GPP • January 2025 - May 2025

- An intelligent privacy-preserving system that hides sensitive user data over social media platforms using genetic algorithms.
- Engineered a privacy-focused solution leveraging genetic algorithms to obscure sensitive personal information across social media platforms, strengthening data protection and user trust.

smart Radar System

GPP • January 2025 - May 2025

- Radar-like IoT system for detecting objects in real-time using sensors and ESP32, visualized with live feedback.
- Engineered a smart radar system utilizing IoT sensors and ESP32 to detect objects in real time, enabling live data visualization and rapid situational awareness for enhanced monitoring capabilities.

EXPERIENCE

Student

Government Polytechnic Pune(Major Project)

July 2025 - Present, Pune, India

- Developed a **dual IoT health monitoring system** for vitals and hormone tracking, targeting rural and urban healthcare needs.
- Implemented **real-time data acquisition** using ESP32 and biomedical sensors.
- Designed and developed a **mobile app UI** for live monitoring.
- Conducted usability testing to ensure reliability and accuracy.**Technologies:** React Native, ESP32, Sensors, Node.js, Firebase

Student

Infosys Springboard

September 2024 - September 2024, Pune, India

- Built a mini toy car that stops and changes direction when obstacles are detected
- Completed multiple IoT and embedded systems courses from Springboard curriculum
- Gained practical knowledge of sensors, microcontrollers, and real-time decision-making
